Specialists in fasteners and hinges

We are committed to constant improvement and innovation, always in close collaboration with our customers, colleagues, and suppliers. We seek success together and try to continuously improve.

SFS offers its services and its products with one goal:
the creation of benefits for the customer.

For our customers, it means having the specific knowledge of our employees available when it comes to development and research, as well as production and marketing to continuously improve the services offered

Effort and competence to arrive at convincing solutions:
our focus is on quality, starting from the first consultation, passing through development, then production, and finally supply. In SFS, productivity and process control are supported by a powerful infrastructure and organization.

Understanding the customer's needs is of vital importance to us

For SFS, closeness with the customer is fundamental.

Our vast geographical presence allows us immediate communications and a continuous exchange of information.

This means that specific solutions can be developed without the obstacle of linguistic or cultural barriers.

Our customers can thus benefit from a global strength yet local presence.

We aim to achieve specific solutions for each application to ensure reliable supplies all over the world.

Company Video

Quality management and workplace safety are of vital importance for SFS.

All the requirements of the quality, environmental, and safety management systems have been gathered by SFS in an integrated company management system called BMS, which documents every company procedure.

The basis of the SFS company quality management system is the fulfilment of the following international regulations:

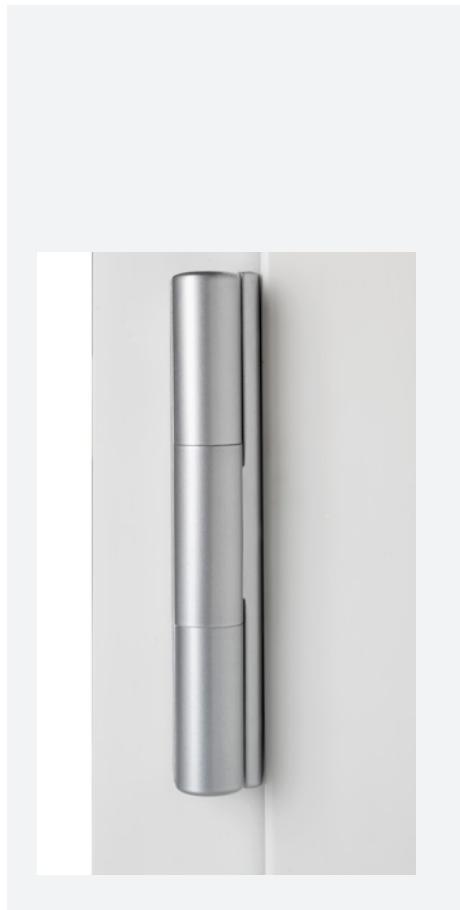

- ISO 9001: quality system management requirements
- ISO 14001: environmental protection system management requirements and application procedures
- ISO 45001: health and safety management requirements in the company depending on the sector in which we operate. There are sites that must comply with additional regulations such as:
- IATF 16949: these are special requirements applied to ISO 9001 for the supply of special parts for the automotive sector
- ISO 9100: requirements for organizations working in the aerospace and defence fields
- ISO 13485: requirements for the medical sector
- ISO 17025: general requirements for internal testing and calibration laboratories

New products

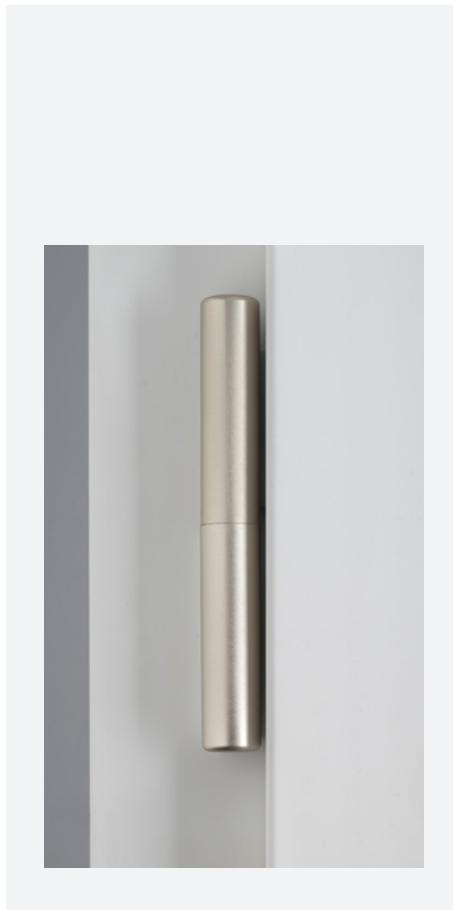

Dynamic 3D-G **Continuous gasket**

The ideal solution for energy saving. For PVC-U entrance doors with a continuous gasket. Adjustable, load capacity 160kg. with 2 hinges.

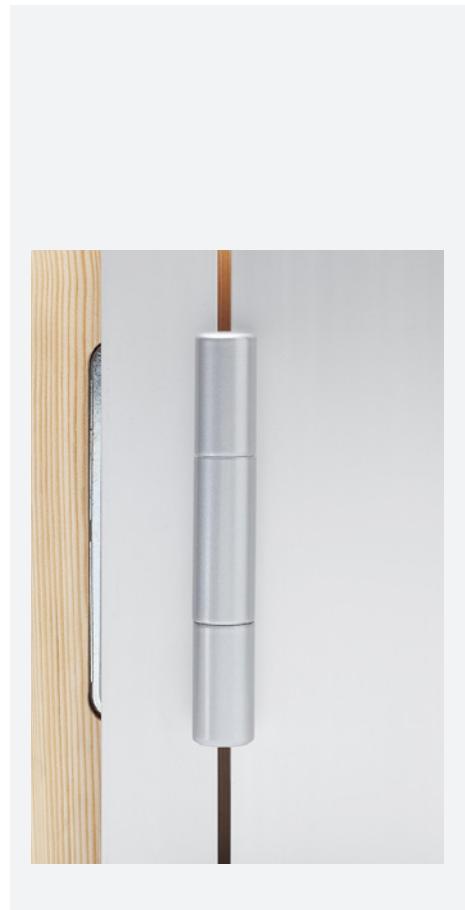

Estetic 3DN **For Eurogroove**

The perfect combination for PVC-U doors and balcony doors but applicable also on aluminium and timber. Adjustable, load capacity 80kg. with 2 hinges.

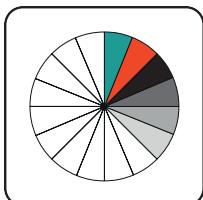

Dynamic 2D-TA **For timber-aluminium**

The quick and easy solution to apply for timber doors with aluminium cladding and external opening. Adjustable, load capacity 125kg. with 3 hinges.

Products Characteristics

Hinges available in different colours

SFS offers a wide range of both galvanic and powder coating finishes. The finishes are resistant to atmospheric agents, and tested according to UNI EN 1670 standards.

Anti-fire resistance

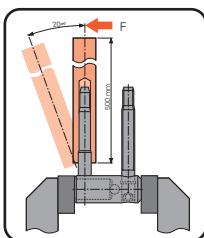

These products are anti-fire tested in accordance to EN1634-1:2018 standards

CE marking

The classification of the hinges takes place following functional tests according to EN 1935 in a recognized external institute

Test Products

Bolt welding test

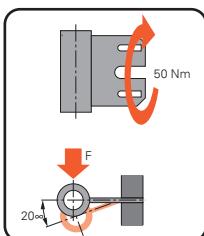

All SFS hinges that the stud has been welded to, must comply with the quality requirements described below.

Test condition:

- Bending of the welded stud by approximately 20°

Condition to be met:

- The welding must remain intact (without cracks)

Welding test for plates with longitudinal welding

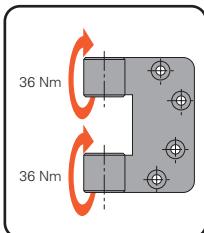

All SFS hinges with a longitudinal welding > 25 mm must comply with the quality requirements described below.

Test condition:

- Apply a 50 Nm torque to the plate as per the drawing.

Condition to be met:

- The welding must remain intact (without cracks)

Welding test for plates with spot welding

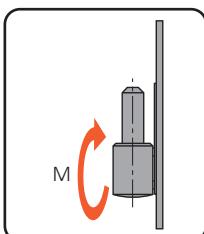

All SFS hinges with plates for flush fit doors must comply with the quality requirements described below.

Test condition:

- Lock the plate, apply a 35 Nm torque to the base body as per drawing

Condition to be met:

- The welding must remain intact (without cracks)

Welding test for fixing plates of hinges for PVC-U applications

All SFS hinges for PVC applications must comply with the quality requirements described below.

Test condition:

- Lock the fixing plate.
- Apply a torque to the base body, of:
 - a) 36 Nm (standard)
 - b) 25 Nm for 2 dimensions adjustable hinges

Condition to be met:

- The welding must remain intact (without cracks)

Functional test according to EN 1935 standard

All SFS hinges subjected to the recommended loads must comply with the conditions established by EN standard 1935.

In addition to the shear strength and static load tests required by the standard, our hinges are subjected to the durability test described below:

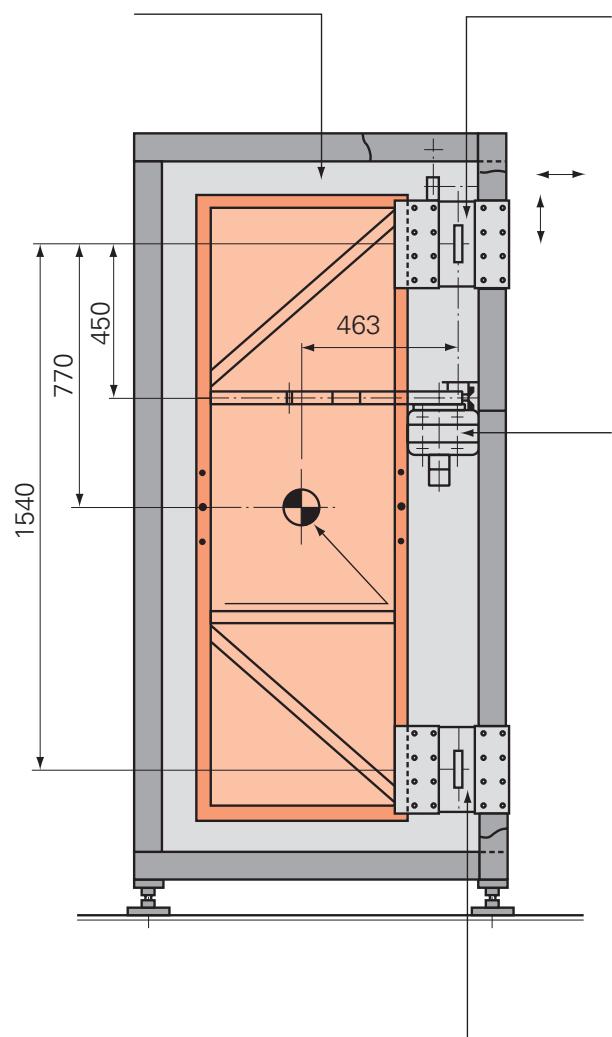

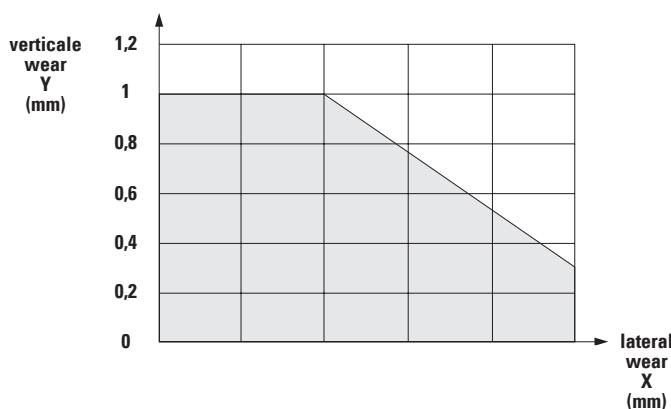

- load the hinged test element with the mass required by the hinge class
- measure and record the relative vertical and horizontal distances between the hinge elements and the reference surfaces
- rotate the hinged test element for 20 cycles at $92.5^\circ \pm 2.5^\circ$
- measure the torque required to start rotation at $0^\circ \pm 5^\circ$, $30^\circ \pm 5^\circ$, $60^\circ \pm 5^\circ$, $90^\circ \pm 5^\circ$
- The max torque detected must not exceed the following parameters:

2 Nm class 1 - 7

3 Nm class 8 - 11

4 Nm class 12 - 14

- the test must be performed with a frequency of 600 ± 30 cycles/hour with an opening of $92.5 \pm 5^\circ$
- after 200,000 cycles, measure the opening torque and the vertical and horizontal relative distances between the hinge elements and the reference surfaces. The extent of side and vertical wear measured as displacement between the reference surfaces must be within the area of the following graph:

All measures in mm

Hinges catalogue 2022 | SFS | V01

Functional test according to RAL standard

The capacity values of the SFS hinges have been measured after subjecting them to the test and in the conditions established by the RAL standard which we summarise below:

1.1 Duration test of 200,000 cycles

Door opening by least 90° and closing

7 - 9 openings and closings per minute

The door is initially moved for 10,000 cycles, then the X₁ - Y₁ measurement is checked. After another 190,000 cycles the X₂ - Y₂ measurement is checked.

The horizontal and vertical offset can be a maximum of 2mm. The hinges must remain functional and after the cycles the door must be able to close starting from a 15° angle.

1.2 Additional load

Open the door at 90° and repeat the load.

After removing the load, the door must not exceed the permissible values in closed position.

The stated weight capacity value was calculated with a dynamic test carried out according to the RAL standard, involving:

- 200,000 opening movements at 90°
- door measuring 2000mm (height) x 1000mm (width)
- 2 fitted hinges

It is important to bear in mind not only the stress due to structural factors (weight and dimensions) but also the external factors that the system is subjected to, as these can affect the weight capacity and life-span of the hinge, for example:

- measurements of the door outside the tolerance ranges (width and/or height)
- place of installation and use of the door (residential buildings, public buildings, schools, nurseries, etc.)
- frequency of opening
- presence of obstacles that prevent opening and/or closing (door stops, reveals, etc.)
- door opener and/or door closer
- doors with inward or outward opening

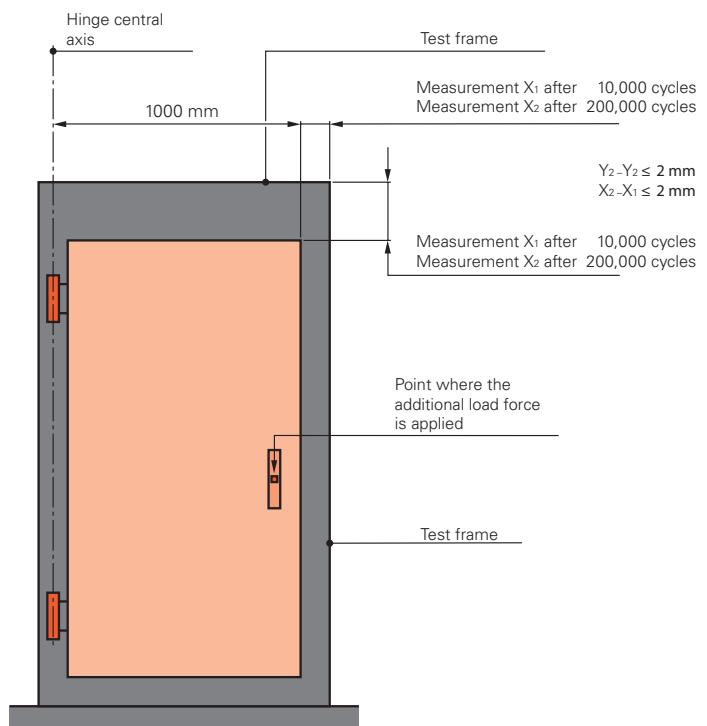

- weather conditions
- type of frame material (wood, PVC, aluminium etc.)

Care should be taken to choose the most suitable system, bearing in mind the factors listed above and the following variables:

- number of hinges fitted
- position that the hinges are fitted in
- type of hinges fitted

The essential requirements for ensuring the best performance of a hinge are:

- installation in a workmanlike manner of the hinge, of its accessories and of the door
- stability and correct installation of the frame

Number of hinges to be fitted

There are formulas to correctly calculate the stresses that the hinges are prone to. Beware that the examples do not take into account all possible variables related to specific applications. It is therefore suggested to contact SFS technical assistance service who can recommend the best solution.

Example A:

Weight of the door/window above the declared weight capacity value

The weight capacity value of 3rd or 4th additional hinge is as follows:

30% of the stated single hinge weight capacity up to 100 kg hinge.

20% of the stated single hinge weight capacity over 100 kg hinge.

Ex.:

Weight of the door: 95 kg

Dimensions of the door: 2000x1000 mm

Declared weight capacity for 2 hinges: 80 kg (=> weight capacity for 1 hinge: 40 kg)

Weight capacity of additional hinge (3rd or 4th): 30% of 40 kg = 12 kg

Number of hinges to be fitted:

80 kg + 12 kg + 12 kg = 104 kg => 4 hinges

Example B:

Width of the door/window above 1000mm

A 10% increase in weight of the door/window should be considered for each 100 mm of width above 1000 mm.

Ex.:

Weight of the door: 70 kg

Dimensions of the door: 2000x1200 mm

Door actual weight: 70 kg + 20% of 70 kg = 84 kg

Declared weight capacity for 2 hinges: 80 kg (=> weight capacity for 1 hinge: 40 kg)

Weight capacity of additional hinge (3rd or 4th): 30% of 40 kg = 12 kg

Number of hinges to be fitted:

80 kg + 12 kg = 92 kg => 3 hinges

Example C:

Weight of the door/window with standard door closing device

A 20% increase in weight of the door/window should be considered when a standard door closing device is present.

Ex.:

Weight of the door: 70 kg

Dimensions of the door: 2000x1000 mm

Door actual weight: 70 kg + 20% of 70 kg = 84 kg

Declared weight capacity for 2 hinges: 80 kg (=> weight capacity for 1 hinge: 40 kg)

Weight capacity of additional hinge (3rd or 4th): 30% of 40 kg = 12 kg

Number of hinges to be fitted (3 hinges at least, 4 hinges recommended):

80 kg + 12 kg + 12 kg = 104 kg => 4 hinges

Number of hinges to be fitted

Example D:

Weight of the door/window with backcheck door closing device

A 75% increase in weight of the door/window should be considered when a backcheck door closing device is present.

Ex.:

Weight of the door: 70 kg

Dimensions of the door: 2000x1000 mm

Door actual weight: 70 kg + 75% of 70 kg = 123 kg

Declared weight capacity for 2 hinges: 110 kg (=>

weight capacity for 1 hinge: 55 kg)

Weight capacity of additional hinge (3rd or 4th): 20% of 55 kg = 11 kg

Number of hinges to be fitted (3 hinges at least, 4 hinges recommended):

110 kg + 11 kg + 11 kg = 132 kg => 4 hinges

In the case of obstacles, door stops, door closers and door openers, it is advisable to use an additional hinge and in any case to consider the extent of the leverage effect that could occur.

This rule is valid for a maximum of 4 fitted hinges. If the number is any higher, a different type of product should be used. Please contact the SFS technical assistance service for advice.

Installation of additional hinges

Additional hinges are usually fitted symmetrically for aesthetic reasons or to ensure pressure on the seal at the centre.

In any case, the fitting of additional hinges at the points under greatest stress improves the weight bearing capacity.

For example:

→ if the door is of above standard width (2000mm x 1000mm), the third hinge should be fitted at an average distance of 300mm from the upper hinge.

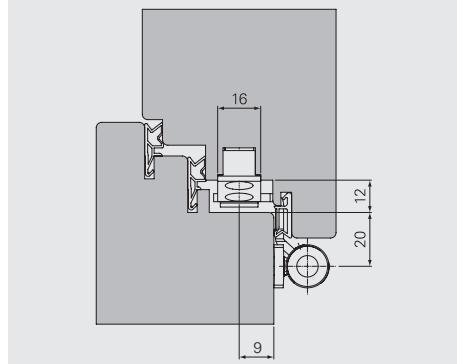

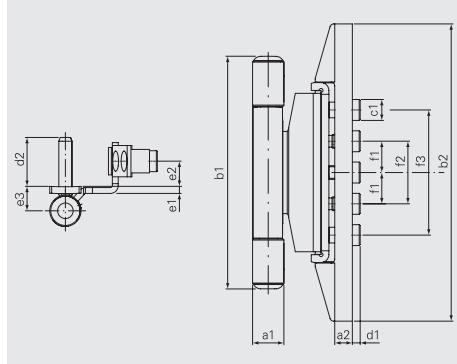

→ when there is a door stop on the floor, the additional hinge should be fitted at a distance of 300mm from the lower one.

→ when there is a door open/closer and in any other case with 4 recommended hinges, the third one should be fitted at an average distance of 300mm from the upper one and the forth one should be fitted at a distance of 300mm from the lower one..

A close-up photograph of a stainless steel hinge assembly against a black background. The hinge is made of polished metal and features several visible components: a cylindrical top piece, a horizontal bar, and a lower rectangular plate. On the lower plate, there are two circular holes with metallic washers and screws. The word "SRS" is embossed on the side of the lower plate. The overall appearance is industrial and precision-made.

A close-up, high-angle photograph of a silver-colored door hinge. The hinge is mounted on a light-colored door panel, which has a visible grainy texture. The hinge itself is made of polished metal and features a cylindrical bearing at the bottom. The background is a solid black, making the metallic and wooden textures stand out.
